An unidentified Cal Poly student puts the final touches on a sign announcing Sunday's march protesting Diablo Canyon being granted a low-power test license.

## Anti- Diablo march planned

BY REENIE CASHMAN  
Staff Writer

A single-file march comprised of local families, students and neighbors who reside within the Diablo Canyon evacuation zone is planned for Sunday to express opposition to the nuclear power plant receiving its low power testing license.

Organizers expect to draw at least 5,000 walkers and call their march "The People's Walk" because it is aimed at people for the immediate community.

According to a Cal Poly business student who helped organize the walk, the

first phase of the People's Walk was last Sunday and drew an estimated 3500 local citizens and students. The student, who did not wish to be identified, described the protest as "one last effort to show opposition by the people of the community." He stressed the goal of a "lawful expression of opinion" instead of an effort to increase the number of arrests made during the blockade.

George Whiting, San Luis Obispo County's sheriff said, "I have no problem with this peaceful walk. They have the right to a peaceful protest, it's when they violate laws that I have to get involved."

## Committee to examine Diablo evacuation plans

BY ROBIN LEWIS  
Staff Writer

Law officials begin to head home as the blockade slows to a trickle See page 7.

A revised campus emergency reaction plan to be used in the event of a radiation leak from the Diablo Canyon nuclear power plant will soon be examined by Cal Poly's Public Safety Advisory Committee, campus director of public safety said Thursday.

Richard Brug said the enlarged plan would provide administrative guidelines for Cal Poly safety personnel in security and evacuation during a natural disaster, local toxic chemical spill or radiation escape from Diablo Canyon.

Concerning Diablo Canyon, Brug explained that upon notification from the county sheriff's office of an "accident of incident" at the plant, he would initiate the plan with President Warren Baker's approval. He said campus-wide notification would come on the alert, and the decision to have the population remain indoors or evacuate would be made when the specific threat was known.

Campus administrators needed for possible evacuation—such as the director of the health center, procurement officer, director of plant operations and transportation supervisor—would be called to the center. If evacuation takes place, buses and vans would be provided for those people on campus without their own transportation from staging areas, explained Brug.

"We'll do what the county sheriff says to do," said Brug concerning continuing

taking shelter or coordinating an evacuation with the county.

Cal Poly Health and Safety Officer Don Van Acker said Wednesday an uncoordinated county and campus evacuation "would jam (Cuesta) grade up so fast" it would be useless as means of escape. He said using Highway 1 north could be an alternate route if the wind direction is normal, to the south.

Van Acker said success of the plan, which, pending approval, is now operational, depends on early and accurate information from PG and quick, knowledgeable response by Cal Poly to notification by public address, telephone and sirens.

The students, staff and faculty "have to know what those sirens are saying when they go off," said Van Acker. "There can be no confusion in that area."

Brug said he must make sure "everybody knows what to do, how to do it and that they cooperate with one another."

Brug said that because of distance and southern prevailing winds, time is not as large a factor in a radiation evacuation as "if a boxcar of chlorine going through campus derailed." Such an accident would present a sharper need for immediate decisions on evacuation, he said.

Brug said he hopes to have the plan approved by both the advisory committee and the President's Council by mid-October so he can begin the training of personnel and education of the campus population.

## Loan deadline nearing

BY MAURA THURMAN  
Staff Writer

Applications for Guaranteed Student Loans will not be accepted by the Financial Aid Office after Oct. 1 because a financial need evaluation required after that date has not yet been developed.

Diane Ryan, associate director of financial aid, said it may be "many weeks" before she receives the completed test and can accept loan applications again. The test must be developed by the Secretary of Education and passed by both houses of Congress, a process Ryan said will take "longer than we'd like."

"It can be so frustrating," Ryan said. "There is so much legislation to unravel and deal with, and then to have the legislation change over overnight..."

Dependent students whose families

earn an adjusted income of \$30,000 or more will no longer be automatically eligible for the loans. The test will take into account other factors such as the number of other children in college, Ryan said.

About 50 percent of loan applicants are not dependent, and will not be affected by the eligibility changes, Ryan said. The remainder of applicants may not receive the full \$2,500 amount, or in some cases, they may be refused any aid at all.

Before 1978, when some financial need requirements were attached to the loan program, Ryan said the staff processed about 900 applications annually. They received 2,000 applications in 1979 when the need requirement was eliminated, and last year processed 7,000 applications.

## Cal Poly to undergo facelift during next five years

BY TRACY JACKSON  
Staff Writer

Fifteen changes in the Cal Poly Master Plan were approved by the Foundation Board of Directors during September which will add and delete building sites on the Cal Poly campus.

The revision conference, which was held Sept. 15 and 16, revised a previously approved Campus Master Plan made in 1975, which calculated facilities for 15,000 full-time students.

"The Campus Master Plan is a blueprint for the future. It's a fluid thing that cannot be set in cement," said Doug Gerard, executive dean of facilities planning. "We make changes in the plan about every five years, but the whole plan is never totally redone," he said.

The first seven revisions approved will add sites to the campus for the growing amount of students entering Cal Poly. To accommodate instructional needs, a site between Crandall Gymnasium and Chase Hall has been

selected for the construction of a new engineering building. Engineering South. This new facility will accommodate classroom and laboratory space and equipment.

The board also approved a site adjacent to the south end of the Business Administration and Education Building to accommodate faculty offices and classrooms.

"The Business Building addition will cost approximately \$1.25 million provided by non-state funds," said Gerard, although he would not specify the source of the funding.

At an approximate cost of \$1.5 million, an extension of the Julian A. McPhee University Union will be built at the north west edge of the Poly campus, near the business building. This facility will complement the already existing University Union in that it will hold student activity areas, study areas and some kind of food service facility, said Gerard.

Please see page 8

It is hard to tell how the Cal Poly campus will look in five years, as there will be at least 15 changes in the university's Master Plan.

## Oil tankers rescue boat people

SAN FRANCISCO (AP)—An oil tanker rescued 35 Vietnamese refugees from a leaky, wooden boat off Vietnam and took them to Hong Kong, Standard Oil Co. of California said Thursday.

One baby was hoisted onto the tanker Carla A. Hills in the ship's mailbag, and many adults were so weak they collapsed on deck after being pulled aboard by lifelines, the company said.

The tanker spotted the 17 adults and 18 children Monday in a 28-foot boat about 175 miles off the coast of Vietnam. The leaky boat was in danger of capsizing, and the "boat people" had been at sea for several days without food or water, Capt. Kurt V. Hansen told Standard Oil.

The tanker, bound from Singapore to Hong Kong with petroleum products, reached port at midnight Wednesday. The refugees were put ashore under arrangements made by the U.S. State Department, the U.S. Consulate in Hong Kong and local authorities.

Standard Oil tankers have picked up refugees in distress at sea five times in the past four years, said Dale Basye, a spokesman for Chevron U.S.A., a division of Standard Oil.

## Newsline

### McCarthy enters Lt. Gov. race

SACRAMENTO (AP)—Abandoning a two-year campaign for the U.S. Senate, former Assembly Speaker Leo McCarthy formally entered the race for the Democratic nomination for lieutenant governor Thursday.

McCarthy's withdrawal from the Senate race leaves Gov. Edmund Brown Jr. with no well-known opposition for the Democratic nomination, and avoids what could have been a bitter confrontation between the one-time Assembly speaker and the governor.

"The central reason for withdrawing from the Senate race is that I had great difficulty trying to raise funds," McCarthy said. "It didn't happen. I've made my decision, and now I will not look back. My appetite is whetted to go after the lieutenant governorship."

McCarthy also refused to rule out another bid for the Senate or governor in the future if he is elected lieutenant governor, a post with little real responsibility which traditionally has been a stepping-stone post to higher office.

### State workers receive interest

SACRAMENTO (AP)—About 200,000 state employees are entitled to interest averaging \$90 apiece on the back pay they won last year, but must ask the Legislature for the money, a state appeals court ruled Thursday.

A unanimous three-member panel of the 3rd District Court of Appeal said the employees are morally entitled to \$18 million in interest on the \$207 million that the state kept until it was ordered to make retroactive payments last December.

But because Gov. Edmund Brown Jr. vetoed a bill that would have given the state employees interest payments, no money has been designated in the state treasury for the purpose, and new legislation will be needed, the court said.

But a spokesman for the California State Employees Association, Keith Hearn, said it might be difficult to get the Legislature and Brown to approve the money because of the state's dwindling money supply.

### 40 hostages seized in Paris

PARIS (AP)—Anti-terrorist police surrounded the Turkish Consulate in the center of Paris Thursday after a four-man Armenian suicide squad seized some 40 hostages, threatened to kill them and blow up the mission unless their demands were met, authorities said.

The commandos demanded Turkey free jailed Armenian political prisoners and fly them to France by 11 p.m., 2 p.m. PDT. They said if the demand was not met all the hostages "will be executed," and that if French forces intervened, the building "and all the people inside" will be blown up.

A Turkish Embassy spokesman said about 15 staff members and 25 visitors, including several women, remained hostage in the consulate.

Ambulances took three people from the consulate several hours after the siege began. One was reported by French radio to be a Turkish security guard killed in the takeover. Police said the others were a wounded Turkish vice consul and a wounded terrorist who demanded political asylum.

The terrorists, in messages dropped from the building and a statement distributed in Beirut, identified themselves as "suicide commandos" of the Armenian Secret Army for the Liberation of Armenia.

## Oct. 1 set as last date for loan requests

From page 1

Because many students are aware of the Oct. 1 deadline, the financial aid staff has been deluged with loan applications since the quarter began. Ryan estimated the daily intake of documents to be processed as 1,050, including certifications of income sources and transcripts from other financial aid offices. They have received about 4,500 Guaranteed Student Loan applications since May, she said, and counseled about 100 students per day during this week.

Despite the increased work load, the financial aid staff is smaller than usual. There are only two counselors instead of the normal four, and Ryan said she will be interviewing soon to fill three receptionist positions. Because of space limitations, Ryan said she is unable to hire the full number of employees provided for by the budget.

"Actually, I'm confident we're going to get it all done," she said. "We get a few disgruntled students, but I think we pretty well meet the demand."

The federal government, however, cannot meet the demand for loan subsidies. The government's bill for subsidizing the banks involved in the loan program is "in the billions, and they can't afford to keep it up," Ryan said.

"I simply can't see how we (the nation) can effect the desired savings in education without these cuts," she said. "I only hope we won't lose too many students."

Ryan said she expects to see more students with part-time employment and lighter unit loads, taking longer to get through school.

"I hope this will teach students to borrow when they need to," Ryan said.

# Charming pirates on the Melodrama shore

BY LORI ANDERSON

Review Editor

While typical pirates would be out sailing the seven seas, "The Pirates of Penzance" have come ashore in Oceano and captivated the audiences of the Great American Melodrama.

With this current production, the producers of the Great American Melodrama once again have put together a delightful combination of theatrical magic and historical charm. Combine this extraordinary performance with the unique atmosphere of the Melodrama, located on Hwy. 1 in Oceano, and an evening of enchantment is the result.

The good ol' days are not gone forever. Behind the big, red doors of the Great American Melodrama lies a small world of Gay Nineties entertainment.

For those who have never experienced the Melodrama, a unique mood and spirit exists there, possess audiences of all ages as they cheer for the honorable hero and boo and hiss at the nasty villain.

Sing-a-long songs and the vaudeville revue, complete with barber shop quartet, short skits and silly jokes, round out an evening of pure enjoyment.

"The Pirates of Penzance" carries on the tradition of pleasure that reigns at the unique establishment, but the two-act comedy is different in one way. The production which debuted September 11 and will run until October 18, is not a boo-hiss regular. What the story lacks is a true villain. This is not a criticism, for instead, it is a "sense of duty" that plagues the hero Frederick.

The story unfolds around Frederick, the pirate apprentice as he is being released from his indentures. Frederick, played by Matthew Lord, was contracted into service when his nurse Ruth

"The Pirates of Penzance" have dropped anchor at the Great American Melodrama in Oceano. Pictured from left to right are cast members Teresa Findlay, Matt Lord and Janet Ferree.

(Teresa Findlay) was instructed to apprentice him to become a pilot, but mistakenly apprenticed him to a band of pirates.

When he is released from service, Frederick, who actually abhors piracy, vows to extinguish his pirate comrades. He engages the aid of three cowardly policemen and they set about the task of

defeating the lawless pirates.

Romance enters the picture when the handsome Frederick falls into the eager arms of Ruth, his former nurse, who wishes to become his wife before he meets younger women and finds them more attractive than herself. But the wool is not to be pulled over the eyes of our hero. Before the marriage can take place, Frederick does indeed meet six

younger girls, all of them daughters of a jolly, major-general.

Frederick and Mabel, one of the young girls fall in love, but through an unfortunate turn of events, they are separated by the allegiances.

Ruth and the Pirate King (Steve Jones) reveal that because Frederick's birthday is on Leap Day, he has had only five birthdays and therefore, remains a pirate apprentice under contract until his 21st birthday. Honor and duty compel our hero to concede to this new discovery and he once again joins the pirate clan.

The story winds down coming to a conclusion that is a delightful one, with wedding bells ringing for more than just one of the general's charming daughters.

Throughout the performance, fine song and dance routines grace the stage. Whether it be the brightly clad pirates-band dancing a jig or the more graceful and flirtatious dancing of the young maidens, routine after routine brought a warm response of appreciation from the audience.

Matthew Lord brought strength and realism to the role of Frederick. His young and innocent face qualified him for the part of the vulnerable hero, who gathered many a sympathy and stole many a heart.

Janet Ferree, who played Mabel, had an exceptionally beautiful voice and made a charming heroine. All of the characters in "The Pirates of Penzance" were well cast and successful, bringing to life basic characteristics and emotions that exist today. Costume design, by Eric Losey was bright and creative, contributing an added attraction to the performance.

"The Pirates of Penzance" comes highly recommended. It is anything, but a disappointment.

## 'Body Heat': a 'sexual Fantasy Island' with intrigue

BY BRIAN RAILSBACK

Staff Writer

Lawrence Kasdan's "Body Heat" is a film victimized by a ludicrous, misleading advertising campaign. The sleazy trailers for this film would lead anyone to believe "Body Heat" is a senseless two-hour lustfest. However, for the most part, any curious moviegoer will be pleased (or disappointed) to find there is a great deal more to the movie than sweaty flesh.

Unfortunately, the first forty minutes of "Body Heat" lives up to its adolescent trailers. From the beginning, Kasdan wants the audience to feel the heat wave that grips the small town in which two-bit lawyer Ned Racine (William Hurt) lives. The desire to transfer the heat wave into the theatre is a bit overdone with several scenes done in red, steamy light, complete with an endless number of sweating people wiping their brows or fanning themselves.

Floating about the humid atmosphere is Racine—a rather one-dimensional character who has an insatiable appetite for females that is reminiscent of a hyperactive tomcat. Racine's roving eye finds the mysterious Mattie Walker, played by Kathleen Turner, and he decides he must have her. Walker, married to a wealthy man, tries unconvincingly to brush off Racine. Eventually

she invites him over to her mansion while her husband is away on business. In the following moments Racine makes a few offensive passes and she kicks him out. However, Racine is *very* macho, so instead of driving away he tosses a lounge chair through a window and gets Walker, who eagerly awaits him inside. Thus, Tarzan gets Jane and the rest is history, except for the following series of outrageous, if not ridiculous, love scenes.

Fortunately, this sexual Fantasy Island gives way to an interesting plot of murder and manipulation. The first chain of events are fairly obvious and cliché: man meets married woman, both want each other and the old man's money, so they murder the old man. The next steps would be for the couple to feel guilty, bicker among themselves as the police apply pressure, and finally get caught. But that old scenario does not surface in "Body Heat"—the ending comes as quite a surprise. It will suffice to say that it is the tomcat Racine who falls prey to a very cold and calculating woman, whose secret dreams have nothing to do with him or any other man.

Generally, William Hurt and Kathleen Turner do a slightly above average performance once they are allowed to move beyond their characterizations of two

love slaves slobbering about in a sweaty sea of passion. After Racine kills Walker (Richard Crenna's sleazy executive character), his feelings of guilt and horror of his own stupidity are exploited well by Hurt. Turner, whose appearance and seductive air somewhat parallel those of Lauren Bacall, succeeds in later scenes as a cold, selfish woman hidden behind a mask of contrived passion.

Kasdan's use of foreshadowing in "Body Heat" is also of some merit. Certain scenes and innuendos are messages to the audience of what is to come, and also lend a sense of irony to the film. In the movie's first scene, Racine is watching a building burn in town and he notes with disgust that the fire was probably set by one of his clients. Yet, Racine himself commits arson when he leaves Walker's body in an old restaurant and torches it with a fire bomb.

For murder and intrigue fans, "Body Heat" is a rather pleasing adventure. However, for those turned off by the exploitation of the movie's ad campaign, the first forty minutes may well prove to be unbearable.

Unless held over, "Body Heat" will be playing at the Fremont Theatre until Thursday, Sept. 29. It is rated "R" for good reason.

Welcome Back Poly!

# Suggestions for food and fun in SLO town

BY SHARON REZAK

Staff Writer

School has only been in session five days, but the first weekend of the quarter is a welcome relief. It's too early to go home and visit Mom and Dad, and homework hasn't piled up yet. What is there to do in SLO-Town, especially if you're a new student and unfamiliar with the best dining and entertainment places locally? Here is an "Entertainment Guide" for all age groups with places to satisfy every taste.

**Spike's Place** at 570 Higuera (in the Creamery) offers more than just unique dishes at low prices—Spike promises a good time. Deep fried potato skins with a variety of toppings, nachos, and deep-fried ice cream are just a few of the specialties Spike presents with a fun, family atmosphere. For those over 21, Spike's Place beats Baskin-Robbins for variety with over 41 imported beers to choose from. Many of these beers cannot be found in local liquor stores. Spike invites beer drinkers to sample each of the 41 beers. When he succeeds drinking the new brew from around the world, he will receive an "I Drank Around the World at Spike's Place" t-shirt, plus have his name inscribed on a plaque on the "Wall of Fame."

Besides beer, **Spike's Place** serves a good assortment of California wines.

For those who like music with a fine dinner, the **Wine Street Inn** at 774 Higuera (in the Network) offers easy-listening guitar music with singer-composer Steve Howard this weekend, to go along with an assortment of fondues and other delicious dishes.

**The Cigar Factory** at 726 Higuera boasts the soft-rock "Keith Forest Band" and Early Bird specials for their weekend fare.

**Mason and Stills** at 1850 Monterey has nightly entertainment and fine food, but Friday is country-rock night featuring a live band out on an open terrace. For drinking-age students, Mai-Tai's are \$1 from 4:30 to 6:30.

**Yancy's** at 1772 Calle Joaquin provides dance music every night—sometimes live, sometimes recorded. This Sunday, the "Desolation Jazz Ensemble" is slated to appear. The menu offers 58 different items with a price range of \$2 to \$11.

For music without dinner, try **The Dark Room** at 1037 Monterey. A bar that hosts live bands, **The Dark Room** has booked punk group "Pennie and the Zippheadz" for this Friday and a Cal Poly student jazz fusion group

"New Vintage" for this Saturday.

**The Graduate** at 990 Industrial Way rocks on the weekends with dancing to basic rock and roll with disc jockey. Happy Hour lasts from 9-10 with 99 cent pitchers of beer.

Those under 21 might enjoy **Station 51** on Edna and Tank Farm Roads, which provides a mixture of rock, pop, and new wave music for dancing pleasure. Or, if music doesn't appeal to you, how about gliding through the streets of S.L.O. with friends on roller skate? **SLO Skate Co.** at 1130 Garden St. will rent skates until midnight on weekends for \$2 an hour with special rates for groups of ten or more.

Some people only want to relax on weekends and **Sycamore Springs** on Avila Rd. in Avila Beach is the perfect place by soaking in hot, swirling water under the stars. The cost is only \$6 per person for an hour of tubbing.

For movie fans, San Luis sports four theatres, including one drive-in. For live theatre entertainment, "The Pirates of Penzance" at the **Great American Melodrama Theatre** at 1827 Pacific Blvd. in Oceano is billed until Oct. 18, with the usual vaudeville review at the end of the show.

Flutist Jim Walker will be performing in the Cal Poly Theatre on Friday, Oct. 2 at 8 p.m. In addition to his solo performances, Walker, who is co-principal flutist with the Los Angeles Philharmonic Orchestra, will be accompanied by piano.

## Quintessence series opens with performance of flutist

The popular Quintessence concert series is back and offers musical experiences from the classical to the contemporary in its fourth year at the Cal Poly Theatre.

The series this year will include two instrumental groups and two solo recitals. Beginning the series Oct. 2, classical and jazz flutist Jim Walker, co-principal flutist with the Los Angeles Philharmonic Orchestra, will perform solo and accompanied by piano. The second solo concert Oct. 24, will offer classical works for the piano played by Philip Lorenz, an acclaimed international performer.

Third in the series, on

Feb. 27, will be the Annual Baroque Concert, featuring the Cal Poly Chamber Orchestra, led by Clifton Swanson, with soloists David Kriebbiel of the San Francisco Symphony on the french horn and Ronald Ratcliffe on the harpsichord. The last concert in the series, on April 2, will bring the Kronos Quartet with its eclectic musical blend of contemporary classic and new pieces such as "Bony-Fingered Back Rub" and "Rock-it".

Cal Poly Theatre

manager Tony Leto said the Quintessence audience has grown each year and he expects the biggest yet this year.

The series also has a new sponsor, the Cal Poly Music department. Due to Swanson's musical friendships, Leto said, the series has been able to attract top musicians for reasonable fees. He also said that the student-priced series tickets (\$10) are available through a subsidy from the Cal Poly Foundation.

## Eleven seats vacant on ASI Finance Committee

Applications for eleven positions open on the ASI Finance Committee are being accepted until 7 p.m. Monday, announced Gail Hannigan, committee chairperson.

The committee is responsible for making budget recommendations to the Student Senate on several student programs, including those involving films, concerts, and intramurals, Hannigan said.

Applications may be picked up at the Finance Committee desk in the University Union, Room 217 A. They may be returned to the office or to the committee meeting 7 p.m. Monday in Room 220 of the union. New committee members will be elected to fill the remaining eleven positions at the Monday meeting, Hannigan said.

The following schools have at least one representative position open: Agriculture, Architecture, Business, Communicative Arts and Humanities, Engineering, Human Development and Education, and Science and Math. The position of secretary is also open.

# Law officials sent packing as blockade dwindles

BY MICHAEL WINTERS

Staff Writer

While members of the Abalone Alliance deny that the Diablo blockade is on its last leg, sheriffs, highway patrolmen and National Guardsmen opposing the blockaders seem to think so.

All but a small contingent of the law enforcement officers went home Tuesday and Wednesday, calling their job done.

"There isn't even enough of them left here to play rugby," said one highway patrolman Tuesday as he kept watch over blockaders at the gate of the nuclear plant.

Five hundred fifty California National Guardsmen went home Tuesday and Wednesday, along with 208 officers of the CHP. Sheriff's deputies from several California counties returned home also, leaving only about 200 highway patrolmen on duty at the site to aid San Luis Obispo County Sheriffs.

"Things are winding down," said Sgt. Robert Cole, a spokesman for the county sheriff's office.

"We'll see about that this weekend," said Joan Wray, a member of a blockading affinity group. She plans to join others late this week in what they hope will be a second wind for the protest.

Any flare-up of new activity at the plant could be met with assistance from nearby Santa Barbara County sheriffs, said Cole.

At a press conference Tuesday afternoon, officers of the CHP, the California National Guard and Sheriff George Whiting told reporters just how much the blockade had cost the taxpayers.

The county sheriff's office, said Whiting, spent \$300,000. The same figure was cited by CHP commissioner Glendon B. Craig for expenses for his agency.

Lt. Gen. Frank J. Schober claimed a cost to the National Guard of \$270,000.

Mustang Daily—David Middlecamp

Law enforcement officials sit on their hats during the first day of the blockade, awaiting protesters.

## Poly blockaders find jail tolerable but arrest rough

BY JUDY LUTZ

Staff Writer

Rough treatment during arrest sharply contrasted community support and friendly jailers, according to two Poly students who participated in the Diablo blockade.

Although their affinity group was roughly treated during arrest, Gary Cavalier and Kathy DiPeri of the Campus Hunger Coalition said local concern, "somewhat supportive" guards and a sense of unity with the other blockaders made their stay in jail tolerable. The seven adult members of their affinity group were later released without charge because the arrest records were lost.

"A lot of the police were physically abusive to some very peaceful people," said DiPeri, a crop science major. Her group's arrest was within view of the plant and

although the group had vowed not to cooperate while on PG and E property. "I was crying so much that I just ended up cooperating," she said.

"Our whole group was non-cooperative," said Cavalier. "They (the CHP officers making the arrest) told us they'd count to three and if we didn't get up we would experience extreme pain," the social science student added. He said several members of the group received bruises and sore wrists from the policemen during the arrest, which took place on the second day of the blockade.

Correctional officers at the jail were friendly, however, according to DiPeri.

"I think it got to their hearts. The guards—we started calling them guardians," she said. "I think they realized how ridiculous it was, too. They knew we weren't criminals."

"We co-counselled each other so we wouldn't flip out,"

she added, describing recreation and legal counselling groups the women arranged as a part of their jail solidarity. Cavalier also said games and talent shows were held. Rock singer Jackson Browne provided entertainment during his stay in the old gymnasium at Cuesta, which served as the men's jail.

Cavalier said he felt there was tremendous local support because of all the food supplied, referring to the boxes of food left at the gate of the Los Osos Valley encampment by area residents.

"Quite a few of the churches were open 24 hours (a day) with prayers for the blockaders. The whole town is covered with (anti-nuclear) bumper stickers," he commented.

Cavalier said he felt the blockade is primarily a local effort. He estimates 80 percent of the protesters come from the area—between Santa Barbara and Santa Cruz.

## Man survives steel bar through the head

LOS ANGELES (AP)—Michael Melnick is a medical marvel to his doctors, who cannot explain how he made a complete physical recovery after a steel bar was driven through his head in a construction accident.

"They tell me there's no room for the bar to fit," says Melnick, the 29-year-old carpenter from Reseda. "But it did."

The doctors are puzzled

that there was no major damage to Melnick's eyes, brain, spinal column or key arteries when the rod pierced his head at the base of his neck and came out between his eyes.

The accident occurred seven months ago when Melnick fell 10 feet through the second floor of a house under construction in Malibu. When he landed and tried to pull his head

up, he found he couldn't. That's when Melnick realized that his head was impaled on a steel reinforcing bar, five-eighths of an inch thick. Six inches of the rough-surfaced bar was protruding from his face.

As his father, Alexander, also a carpenter, and other workers tried to make him comfortable until medical help arrived, Melnick said he was "sure I was going to die."

He went into shock as

lifeguards from nearby Zuma Beach sawed the bar from the concrete where one end was embedded. He was under anesthetic as Dr. Paul Ironside at Westlake Community Hospital removed the rod.

Melnick has since accompanied Ironside to several doctors' meetings where slides of him at the hospital are reviewed and his fading scars are examined.

## Humanities meet Tuesday

The Council for the School of Communicative Arts and Humanities will convene for the first time this year next Tuesday, Sept. 29. Any departments within this school that want a representative to this council should send one Tuesday. This is just an organizational meeting, and the council will not necessarily be meeting at

this time every week. The main item on the agenda will be the election of a new president.

The position is open to anyone in the School of Communicative Arts and Humanities. For more information contact Dr. Andreini at extension 2523 or attend Tuesday's meeting in UU 218, at 6 p.m.

# 15 revisions in Cal Poly Master Plan scheduled

From page 1

A move for the Foundation administration was also approved in the Master Plan revision. The current administrative offices are housed in the University Union and will be relocated to a central ad-

## AGSA barbecue

The Agricultural Graduate Students Association is planning a chicken barbecue for agricultural graduate students and their families today at Poly Grove beginning at 5:30 p.m. The cost of the barbecue is \$2.50.

ministrative structure separate from the University Union, said Gerard. The site designated for this move will be by the Welding Building, across from the new Faculty Office Building, he added.

The last three areas for revision are areas which directly affect students—these were altered because of past student complaints. Revision is planned for Crandall Gym, which will be removed. A new facility will also be added between the present Physical Education Department Building and the Health Center. This move will cost approximately \$3 million,

also funded through non-state sources, according to Gerard.

A site for a residence hall recreation area has been added to the Master Plan to provide more recreation facilities for the 2,800 on-campus resident students. The facility will include barbecue pits, basketball and volleyball courts and will be located behind Sierra Madre and Yosemite dorms, he said.

Gerard said one of the biggest complaints by students attending Cal Poly was the lack of parking areas which the board hopes to alleviate. Two multilevel parking struc-

tures costing \$2.5 million will be built on the already existing parking areas behind the Cal Poly Theatre and across from the Robert E. Kennedy Library H-2 lot, Gerard said.

The Board of Directors also felt the need to remove some existing structures due to their inefficiency and increasing campus population. Deleted will be a classroom structure on the south section of the campus, President Baker's present conference center, located behind the president's house, and Crandall Gymnasium, deleted for the new Physical Educa-

tion facility, he said.

Also designated for deletion was the Farm Machinery Building, which will be moved closer to the agriculture units, and the Student Services Hillcrest Facility which will be moved to the Student Services Building complex on College Avenue. The Hillcrest Facility has been used for the temporary Student Services administrative of-

fices.

For reasons of future convenience by students, the Housing Office will be moved toward a site near Grand Avenue and Slack Street, as the board plans future on-campus dormitory structures to be built in this area.

These changes are scheduled to be completed within the next five years, Gerard said.

## People walk protests test license

From page 1

Although the march was originally aimed at only

Cal Poly students, organizers anticipate many prominent figures in the community to participate in the walk.

The People's Walk will begin at 10 a.m. on Sunday at Front Street in Avila Beach and will continue to the Diablo Canyon gate and back. The march is expected to last for three hours.

**Friends sometimes question  
your taste in movies.  
But they'll see them with you anyway.**

It sounded fantastic in the newspaper. But only to you. Still, you had to see it, and with a little arm-twisting your friends agreed to see it too.

You've already heard a barrage of jokes about your taste in movies since the curtain came down. And, knowing your friends, it'll go on for weeks.

So, to make it up to them, and show them your taste isn't bad in everything, you do something a little special. Tonight, let it be Löwenbräu.

**Löwenbräu. Here's to good friends.**

## Protesters describe arrests, term in jail

From page 7

"There were a lot of (local) people supporting us...that weren't the 1500 arrested," DiPeri said. Both students, however, said they have seen little involvement on the part of Poly students.

"I don't know how concerned the students are. I see a lot of apathy in the students around me," DiPeri said. She and Cavalier blame Poly students' lack of concern on the college's emphasis toward technology and careers. Most Poly students do not consider themselves local or get involved in local concerns, they said.

"I know the Abalone Alliance didn't even bother with Poly after a while," Cavalier said. "They kind of gave up on Poly."

In addition to the affinity group of Poly faculty and staff, members of Campus Hunger Coalition and the Ecology Action Club were involved in the blockade, DiPeri said.

"I don't see how with any conscience they (PG and E) would allow that risky fuel loading process with that many people—police and blockaders—on site," said Cavalier. He and DiPeri hope the continued presence of blockaders will prevent PG and E from beginning the low power testing even though they have received a license to do so.

"I think people believe that if they got in close enough, the NRC would require PG and E to do another security check before firing up," said DiPeri. "As close as I got to the plant, I really think a terrorist can get that close...How effective is it (the security plan) going to be keeping violent people out of there, let alone non-violent?"

Mustang Daily—John Lynch

Kathy DiPeri and Gary Cavalier reflect upon their experiences as blockaders. Both were critical of the lack of involvement of most of their fellow Cal Poly students in the Diablo issue.

SUGARLESS SHACK

# HP operates on the premise that people should enjoy getting up in the morning.

When you go to a job that's built around your skills and interests, it hardly feels like work. That's the way it is at HP. Here we put the emphasis on the individual, finding out what you want to do rather than simply telling you what we need. And you get to participate in a significant project right off the bat, rather than waiting years to reach a "responsible" position.

### Quality people equal quality products.

That makes sense. And it has certainly proved itself at HP. We've grown to have more than 200 offices and plants around the world. That means we need a lot of excellent people to fill diverse, challenging jobs in our various divisions, making computers, components, and instruments for engineering, science, medicine and business.

But even with our size and steady growth, the importance of the individual has not diminished in the least. This personal concern is summed up in a simple term: *the HP Way*. It covers everything from flexible work hours (HP was one of the first companies to let you pick your own schedule) to our Management by Objective. This basically involves setting a goal and giving you the responsibility for getting there, in the way you think is best.

To keep things on a human scale, we decentralize everything we can. Whether you're in R&D, field sales, manufacturing, marketing, administration or service, you'll be working in a small group.

### You get all the other benefits, too.

Obviously, you're not in this solely for the enjoyment. So we offer excellent pay and benefits; additional courses and help in continuing your education; the opportunity to work in some of the most pleasant parts of America and the world; and a genuine chance to grow in a career that will be a constant challenge to your ingenuity. (For example, HP is the only company that has made a large-scale commitment to Silicon-On-Sapphire IC Technology. When we like an idea, we go for it!)

### A chart to go by (or not to go by).

To get a better idea of the opportunities here, you might want to check out this job chart.

Then check with the college placement office. We'll be on campus the week of Oct. 5-9 to talk with you about per-

## Keyes graduates

## Mustang cross country teams deep with talent despite loss

BY TOM CONLON  
Sports Editor

The loss of a three-time All-American runner would be enough to deflate the hopes of any cross country team, especially the Cal Poly women's team who have to contend with such NCAA Division I powerhouses as U.C. Berkeley, Stanford and defending national champs North Carolina State. But Mustang coach Lance Harter has taken the graduation of Maggie Keyes in stride and remains optimistic about the chances of this year's squad.

"We feel we have a better team than last year... We have more depth," Harter said. The coach explained that not having one individual standout on a team with as much talent as the Mustangs can actually be an advantage.

"There is no established pecking order on this team," he said, which means competition among the women for the number one spot should produce a better overall team performance.

This will be the first year the NCAA sponsors a women's cross country program—Cal Poly is classified a Division II team. Said Harter, "Financially, we are Division II but with the caliber of athletes we have been fortunate to have here, competitively we're Division I." The Mustangs' schedule would seem to back his claim.

Harter has everyone back, except Keyes, from last year's sixteenth, nationally ranked team. Defending Division II 15,000 meter champion, Eileen Kraemer figures to lead the way followed closely by several

strong runners: Irene Crowley, Carol Gleason, Amy Harper, Jennifer Jamesson, Liz Strangio and Janice Kelley.

## Men's Team

Since men's cross country and track coach Steve Miller left for the prairies of Kansas during the summer, Harter has been pulling double time, coaching both the men's and women's cross country teams. "It's an emergency situation... This is the first and last time," he said.

Harter noted that a disproportionate amount of attention has been given to Miller's departure. "Miller left but the team is still here. It was created by him but there are many new faces," he said.

However, the team will be lead by a couple of familiar faces: seniors Carmello Rios, defending Division II steeple chase champion, and All-American Doug Avarit.

# Craig: Poly offers more than football

BY MARIA CASAS  
Staff Writer

Jespersen and Heron, more commonly known as the 'jock' dorms, are home to some of Cal Poly's finest athletes. They are timeworn buildings, dating back to the early days of Cal Poly. One hopes that any minor movement of the nearby San Andreas Fault would not result in Jespersen and Heron crumbling to the ground.

Upon entering Jespersen, one is subjected to the traditional dorm activity: screaming, a ringing telephone, people running after one another, and laughing.

But behind one door, momentarily secluded from all the noise, sits one friendly and out-going young man who has more to offer the Mustang football team aside from carrying the ball.

Fullback Danny Craig, a junior from San Jose, is as ecstatic as a one-year-old baby learning to walk when it comes to playing football and living. He uses both to his fullest extent.

"I enjoy sports, I enjoy the Cal Poly program, and I want to be here," said

Craig. "It's unique here. Head coach Joe Harper and his staff not only stress football. They want us to find out about ourselves."

Craig said it is a drawback playing for a Division II team because there is not a lot of money involved. The jock dorms for example are in bad shape but the athlete's fix them up the best they can. Craig's dimly lit room has two wooden bunk beds, two wooden dressers, and a cedar wall which Craig and his roommate built.

"It's a pull together type of situation," said Craig. "We respect the philosophy because we are finding out about ourselves."

Living in the jock dorms with other athlete's holds for Craig some of his fondest moments.

With a smile from ear to ear, Craig recalls a bachelor party they held for a fellow teammate at the Vets Hall.

"There was a lot of food and beer," said Craig. "It got out of hand. We got kicked out of the Vets Hall. It was crazy but so fun. We crashed two or three parties later that night. It was definitely an experience."

Craig said the dorms are mello right now but in the winter and spring quarters they go crazy. You discipline yourself, budget your time, and go to the library to study during

those crazy times.

Aside from football, Craig also enjoys baseball. In high school he had a .460 batting average, but decided he could not excel in both sports so he pursued football. But he still remains a baseball fan, with the Dodgers being his favorite team.

"The baseball strike was one of the worst things," said Craig. "It took away from the sport. Too much money does that. After the strike I lost interest so I didn't follow the game as much. Hopefully next season will be different."

Craig aims to apply his knowledge of physical fitness, he has acquired through his recreation administration major, to begin a corporate fitness program. This would involve directing or setting up a fitness program for a company's employees.

"People under stress because of their jobs may just need a physical fitness program to relieve them," said Craig. "And I like working with people in the physical fitness aspect."

Outdoors sports also hold a great interest for Craig. Camping at Mount Lassen with friends and skiing at Lake Tahoe are among his favorites.

Time does fly quickly, as Craig has to return to Cal Poly a month before school opens to begin hell week.

"You have to put

yourself on a different level for two weeks," said Craig.

A typical hell week day would begin at 8 a.m. and end around 5:30 p.m. with football being the talk of the whole day.

One could say that football is a full time job plus overtime during the season. About 40 hours a week are devoted in preparing for a game. This preparation involves knowing your job and doing it in harmony with your team and knowing everything about the opposition there is to know.

If this isn't enough to keep Craig and other athlete's busy, they still have to maintain a full time student status.

"A lot of teachers are mislead and think jocks get all the breaks," said Craig. "It's not like that. We work hard in school."

So as the season progresses, Craig will put in his 40 hours a week and carry the ball for the Cal Poly Mustangs on game days. He will then rendezvous with his textbooks each evening. Problems will occur sometimes.

"I get down and complain," said Craig. "But I always bounce back."

## XCountry

From page 10

The new additions to the squad include junior college transfers, Mike Lendson, Steve Cubillos and Kevin Brodie, and former national high school champion, Jay Marden.

Both teams start the new season at the U.C. Santa Barbara Invitational this weekend.

## Scrap the MX

Its construction would require 40 percent of the United States' total cement production for three years. It would require the displacement of more dirt than it took to build the Panama Canal, not to mention the building of some 10,000 miles of roads—one fourth the entire mileage of the Interstate Highway System.

The U.S. Office of Management and Budget estimates it would cost \$56 billion, some \$250 for every man, woman and child in America.

Those are just a few of the striking facts behind the proposed MX missile system, the most expensive public works project ever proposed in our nation's history.

There is little argument among proponents and opponents that the MX's costs, both in dollars and cost to the environment, will defy the imagination. And unfortunately, the MX, if built, will fail to achieve its intended purpose: Protecting the U.S. from nuclear attack in the 1980's and 90's.

MX proponents argue, with justification, that our nation's 1,000 land based minuteman missiles (ICBM's) have become vulnerable to a surprise attack from the Soviet Union because their location is fixed, making them easy targets for Soviet ICBM's.

They argue that the MX system would solve this problem, as its 200 planned missiles would be moved on underground roads amongst a system of 4,600 shelters, each a mile apart.

Because each missile could be located in one of 23 shelters, the Soviets would never know their exact location, supposedly making them invulnerable to attack.

Sadly, the MX plan is based on the assumption that the Soviets would make no response to the MX. If the Soviet Union decided it wanted to be able to knock out all our MX's, as it could our 1,000 present Minutemen, it would have to deploy another 4,600 nuclear warheads for its missiles. Would the Soviets be willing and able to do so? The answer, from former CIA director Stansfield Turner, is a resounding yes, even under the limitations of SALT II.

Of course, Turner points out, the United States would not stand idly by to this threat. It would probably deploy more MX's and build more shelters. The Soviets would then probably then build more warheads for its missiles, at a much lower cost than for the United States to keep deploying MX's. Where would it all stop?

The United States, however, could defend the MX's with an anti-ballistic missile system, but at the expense of the successful 1972 ABM Treaty. Even then, it would cost the Soviets far less to deploy more warheads than for the United States to build an ABM system.

Does this mean we are hopelessly vulnerable to a Soviet attack? Fortunately, says Turner, we are not. There are a number of excellent alternatives to the MX, all of which are effective and less vulnerable, not to mention less costly.

The most viable solution would be to place our ICBMs in a diverse mix of systems, deploying them onboard ships, on aircraft and on large, road mobile trucks.

President Reagan will be facing a decision on the future of the MX in the coming weeks. The president says he is committed to strengthening our national security and balancing the federal budget. He could take a big step toward realizing both goals by scrapping the MX.

## Mustang Daily Policy

The policy of the *Mustang Daily* regarding letters and submitted material such as letters and press releases outside of the newspaper staff is as follows:

Letters should be submitted to the *Mustang Daily* office in Graphic Arts building 226, 9 a.m. to 5 p.m. weekdays or by mail to Editor, *Mustang Daily*, GrC 226, Cal Poly, San Luis Obispo, CA 93407. Letters must include the writer's signature and social security number.

Editors reserve the right to edit letters for length, style, and libel. Letters should be kept as brief as possible. Inordinately long letters will not be printed.

*Mustang Daily* encourages reader comments on news stories, opinion pieces, and editorials.

Press releases should be submitted as early as possible to the news editor in the *Mustang Daily* office or by mail. All releases should include a phone number and name where further information may be obtained.

Editors reserve the right to limit, condense, rewrite and edit press releases and make judgements based on their news value.

### Parental decision

Editor:

Robert Lee did a beautiful job of reducing the status of all human "Beings" to that of a collection of cells and women to that of reproductive mechanisms to be controlled like farm stock.

His statements reek of cold religious dogma, and are devoid of humanity, practicality and foremost, spirituality.

I ask the question, if souls are created as a result of biological mechanisms, then what is left when the body dies? How is it that we are to realize eternal life?

My answer to these questions is this: that the Divine spark of consciousness has its "Being" independent of the biological entity and is existent before conception and after death, and that the body is but a clay vessel for this divine

spark. Genesis 11:7 says, "The Lord God formed man of dust from the ground, and breathed into his nostrils the breath of life; and man became a living being."

If a woman chooses not to take the responsibility of bearing, feeding, and most importantly, caring for a child for a large portion of her life, it should be her decision alone in matters of conception, birth control and abortion.

It is my point of view that an abortion is no more a murder than it is to kill an appendix by removing it.

If we are to have children in this society, it should be a conscious decision on the part of both parents who are motivated out of the love of that spiritual life that will be embodied in the physical form at birth.

### Screw loose

Editor:

This is in response to the letter written by Robert Lee, the founder of the Gametic Right to Life Movement. The guy obviously has a screw loose! Doesn't he realize that many of the world's problems are because of overpopulation? The results of a ban on all methods of contraception would be disastrous. There are already too many teenage pregnancies and unwanted children. Why doesn't Mr. Lee take interest in the babies who are forced to

live in filth and starve? That is where the greatest problem lies: none of the pro-life fanatics seem to care what happens to the babies after birth.

It infuriates me to hear someone, especially a male, trying to tell us how and when to reproduce. If these people are against contraception and abortion, fine, they don't have to partake, but they have no right to try to pass their morals off as laws on the rest of us.
